

Patuxent Wildlife Research Center

North American Bird Banding Program - Bird Banding Laboratory

Summary

Bird banding is important to the evaluation of species management assessments and actions, such as hunting regulations, manipulation of habitats, and monitoring species of concern as well as threatened or endangered species. Individual banding and identification of birds assists in further understanding of species dispersal and migration, behavior and social structure, lifespan and survival, population and productivity, toxicology and disease, and harvest vulnerability. In order for the Bird Banding Laboratory (BBL) to be successful in continuing its support of conservation and management of birds, users need an intuitive and efficient way to report banded bird encounters while reducing error rates and enhancing the quality of information received. In addition to reporting data, some user groups need easy access to data reports for research relevant to bird conservation and

management. All banding data is potentially valuable, so access to this needs to be intuitive and data output needs to be customizable. The intent of this report is to provide recommendations to enhance the current BBL Encounter Form as well as a way to integrate a Data Request and Search for users to obtain summaries of banding and encounter data.

Report a Bird Band or a Marked Bird

In order for bird banding to be effective, encounters of banded birds need to be reported back to the BBL. Encounters may include resighting, recapture, or recovery of a marked bird, alive or dead, after the initial banding. In addition to scientists, encounters may be reported by both avid bird watchers as well as those with limited knowledge about birds. It is important to consider all three of these user groups when enhancing the existing Encounter Form in order to provide an optimized user experience regardless of background. It is equally important to capture the appropriate data needed for future analysis and reduce user error. The following wireframes account for a diverse user group while keeping the goals of the Encounter Form in mind.

Create a Report

1. Log In, Create an Account, Report as a Guest

Anyone can create an account. It's anticipated that those who do will typically be scientists and avid bird watchers with the remaining users opting to complete the form as a guest. Those who choose to be a guest user will be asked to fill in their contact information, but the system also allows them to create a BBL account directly from the current screen. At that point the necessary components display.

Header

Bird banding is a universal and indispensable technique for studying the movement, survival and behavior of birds. See [examples of Federal bird bands and different types of color markers](#) if you need additional information to fill out a report.

If the band is unreadable [you can mail it to the Bird Banding Laboratory](#). If you have already reported your Federal Band or Color Marker and [you may request another copy of your Certificate of Appreciation](#).

Benefits of a BBL Account

Creating a BBL account is free and easy. An account grants you the following benefits:

- See a history of your reported birds
- See other encounters with the birds you have tracked
- Faster reporting of birds

A	Already have a BBL account? Sign in Here	Text Link		Navigates user to the login form (screen 1) .
B	First Name	Text input	Required	
C	Last Name	Text input	Required	

D	Email address	Text input	Required	Validate for proper email formatting
E	Daytime phone	Text input with pre-formatted area code and dash	Optional	As the user types into the field, the area code parentheses and dash are pre-populated.
F	Please select all of the options that apply to you	Checkbox group	One selection is required	Options for checkboxes: <ul style="list-style-type: none"> • I am the finder or am reporting on behalf of the finder. • I am a bird bander or a bander's assistant. • I am Federal, State, or Provincial official.
G	Permit number	Text input	Optional as international permits are not accepted.	Visible if "I am a bird bander or a bander's assistant." is selected for Component F on screen 2 .
H	Street Address	Text input	Optional	Text input utilizes the Google Maps API, when the user begins typing their address, they are presented with address options in a typeahead. When an address is selected from the dropdown, the entire address form is populated. An example of this api can be found at: https://developers.google.com/maps/documentation/javascript/examples/places-autocomplete-addressform
I	Address Line Two	Text Input	Optional	Will be populated by Google Maps API. Resulting address can be overwritten.
J	City	Text Input	Optional	Will be populated by Google Maps API. Resulting address can be overwritten.
K	State	Text Input	Optional	Will be populated by Google Maps API. Resulting address can be overwritten.
L	Zip / Postal	Text Input	Optional	Will be populated by Google Maps API. Resulting address can be overwritten.
M	Password	Password Input	Required	User input is masked when they are typing. When user enters text into the field, an eye icon appears at the right side of the field that allows the user to see the text they are entering. As user types into the fields, a popover appears below the input that informs the user of the password requirements. As the requirements are met, each line of the popover will have a visual feedback that informs the user that they have met that criteria (for example, a red "X" changes to a green check).
N	Confirm Password	Password Input	Required	User input is masked when they are typing. When user enters text into the field, an eye icon appears at the right side of the field that allows the user to see the text they are entering. Field

				validation tests if the content of the field is identical to the input of Component M (Password).
O	Create Your BBL Account	Button		Triggers creation of a BBL account and redirect user to the New User Dashboard.
P	Cancel	Text Link		Clears all inputs of the Create BBL Account form and redirects user back to screen 1 . User account is NOT created.

3. New User Dashboard

One advantage to being a registered users is the ability to a login and view previously entered reports from a dashboard view.

The screenshot displays the New User Dashboard. At the top, there's a header with a logo, a 'Header' label, and links for 'My Account' and 'Log Out'. The main content area starts with a welcome message for '<<BBL User>>'. To the right of the welcome message is a language switcher (C) with buttons for 'English', 'Spanish', and 'French'. Below the welcome message are two main action buttons: 'REPORT A NEW BIRD ENCOUNTER' (A) and 'EDIT MY ACCOUNT INFORMATION' (B). Further down, there's a section titled 'My Submitted Reports' which contains a table with columns: Date, Location, How Obtained, Marks, Report Status, and Action. A message box indicates 'Once you have submitted a report, it will appear here.' At the bottom right, there's a '+ Create a New Report' button.

A	Report a New Bird Encounter	Button		Navigates user to step one of the encounter form.
B	Edit My Account Information	Button		Navigates user to an account page that allows user to edit their account information,
C	Language Switcher	Button Group		When the user clicks a language button the language of the dashboard, user account section, and encounter form is

				instantly changed to the language that the user has selected. The language remains selected as part of the user's account information until the user changes their selection. The default language is English.
--	--	--	--	--

Encounter Form

4. Encounter Form Step One: Date and Marker Type

In order to help navigate the user through the form flow, bird marking information is asked up-front. As the user moves forward through the form, they will be presented only with the information that is relevant to them. An in-context Encounter Summary ([screen 9a](#)) will allow users to see which markings they've selected and easily edit their choices at any point in the form.

The screenshot shows the 'Step 1: Encounter Date and Marker Type' form. At the top, there's a header with a logo, a 'Header' label, and links for 'My Account' and 'Log Out'. The main content area is titled 'Step 1: Encounter Date and Marker Type'. It features a date input group (A) with fields for day (22), month (November), and year (2017), and a checkbox for 'Hunting season' (B). Below this is a section (C) titled 'Select all markings that appeared on the bird:' with checkboxes for 'Band', 'Reward Band', 'Color Marker', 'Dye on bird', and 'Electronic device'. A 'Go Back' link (E) and a 'CONTINUE TO LOCATION INFORMATION' button (D) are at the bottom. An 'Encounter Summary' box is on the right.

A	Date of encounter (approximate)	Date input group	Required	<p>The date input group consists of the following fields:</p> <ul style="list-style-type: none"> • Day text input - accepts only a two digit numerical input for day of the month • Month dropdown - options for each month of the year • Year text input - accepts only a four digit input for the year
---	---------------------------------	------------------	----------	---

B	Hunting season	Checkbox	Optional	
C	Select all markings that appear on the bird	Checkbox group	One selection is required	Options for checkboxes: <ul style="list-style-type: none"> • Band • Reward Band • Color Marker • Dye on bird • Electronic device Selections of these checkboxes show or hide later corresponding steps of the encounter form.
D	Continue to Location Information			
E	Go Back			

5. Encounter Form Step Two: Location of Encounter

Increased encounter reporting provides useful information in understanding movement and migratory patterns, survival rates, and the effects of environmental conditions and management actions. It's important, therefore, to have accurate location information regarding bird encounters. By utilizing the Google Maps API, user's are given immediate feedback on their location input. The user is able to enter the name of a common place and the map's API generates an exact latitude and longitude that the user can further manipulate by dragging the resulting marker to the desired point. Additionally, users have the option of using their current geolocation or manually entering an address, point of reference, or longitude and latitude that will then be entered into the encounter record.

			required.	
E	Status of the bird	Select box	Required	See metadata type 13.3.3 for select options.
F	Species	Autocomplete	Required	When the user starts typing into the input, the autocomplete matches the text and provided all of the inputs into a dropdown. When the user selects an option, it is populated into the input.
G	I don't know the species of the bird	Text Link		Triggers the Species Identification Flow popup (screen 6a)
H	Continue to marker information	Button		Submits the band and bird information and navigates the user to the next applicable step of the form (based on answers selected in screen 4 , component C)
I	Go Back	Text Link		Returns user to the Location of Encounter Screen (screen 5)

6a. Species Identification Flow Step One: Birds by Type

In the species identification flow, users are guided through screens that help them to identify the bird they encountered. In step one of the flow, users can select a bird type and are provided with a narrowed down list of bird species.

The screenshot displays a web application interface for bird species identification. At the top, there's a header with a logo, a header label, and links for 'My Account' and 'Log Out'. The main content area is titled 'Step 3 of 5: Band and Bird Information'. On the left, there's a form with fields for 'Status of' (Left On Bird), 'Band' (Prefi 123), 'Reward Num' (12345), 'How was the' (Caught By Har), 'Caught due' (Found in build), and 'Status of the' (Alive Released). Below these is a 'Species' field and a link 'I don't know the species of the bird'. At the bottom, there's a 'CONTINUE TO MARKER' button and a 'Go Back' link. On the right, there's an 'Encounter Summary' section with fields for 'Types:', 'rd Band, Color', 'on bird', ':', '0543179', and '0000001', each with an 'edit' link. A modal window titled 'Species Identification' is open in the center. It has a close button (X) and two main sections: 'Select a Type of Bird' (A) with a 'Bird Family' dropdown, and 'Browse a List of Bird Species:' (B) with a dropdown. Below these are two buttons: 'SELECT SPECIES' (C) and 'I can't identify the species' (D).

A	Select a Type of Bird	Select Box	Required	See metadata type 5.0.0 for select options.
---	-----------------------	------------	----------	---

B	Browse a List of Bird Species	Select Box	Required	See metadata type 6.0.0 for select options.
C	Select Species	Button		Closes the Species Identification Flow and populates the species name into screen 6 , component F
D	I can't identify the species	Text Link		Navigates the user to Step Two in the Species Identification Flow

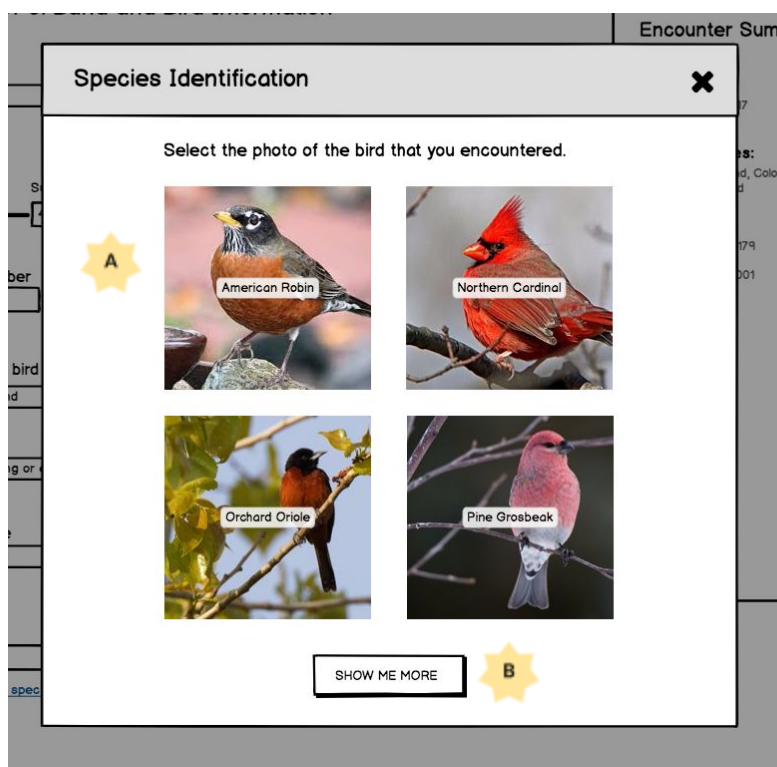

6b. Species Identification Flow Step Two: Enter Bird Details

In the event that a novice user does not know the type and species of bird, they are presented with further information to help narrow down the species they encountered. Combining this data with the already reported location data allows the interface to bring back the most likely combination of species. The more data the user is able to provide on this screen, the narrower the resulting list will be ([screen 6c](#)).

A	Bird Sex	Radio group	Required	See metadata type 13.5.5 for select options.
B	Bird Size	Radio group	Required	See metadata type 9.7.0 for select options.

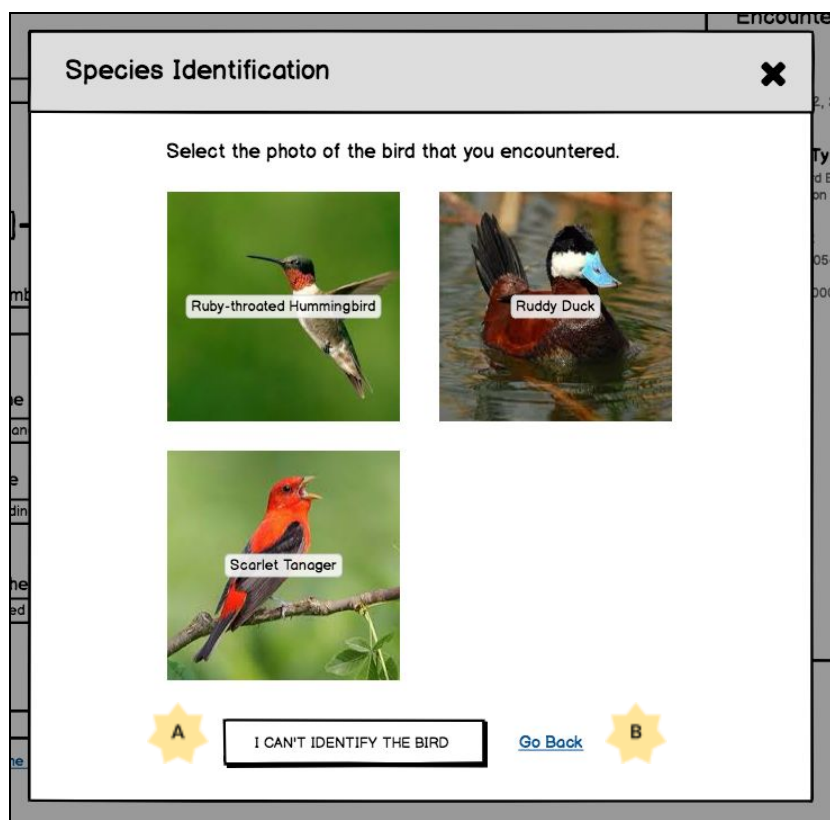

C	Primary Color	Select box	Required	See metadata type 12.5.0 for select options.
D	Beak Shape	Select box	Optional	See metadata type 12.3.0 for select options.
E	Secondary Color	Select box	Optional	See metadata type 12.5.0 for select options.
F	Habitat	Select box	Optional	See metadata type 11.3.0 for select options.
G	Sound	Select box	Optional	See metadata type 12.4.0 for select options.
H	Feeding behavior	Select box	Optional	See metadata type 12.2.0 for select options.
I	Find Species	Button		Submits Species Identification form and navigates user to Species Identification Flow step three (screen 6c)
J	I don't have any details about the bird	Text link		Closes the Species Identification flow and populates "Unknown" into the species input at screen 6 , component F.

6c. Species Identification Flow Step Three: Select Bird That You Encountered

A	Species name and image	Linked image and text		See metadata type 6.0.0 and 8.0.0 for image and common name information
B	Show Me More	Button		Advances user through additional screens of bird images, if they are available.

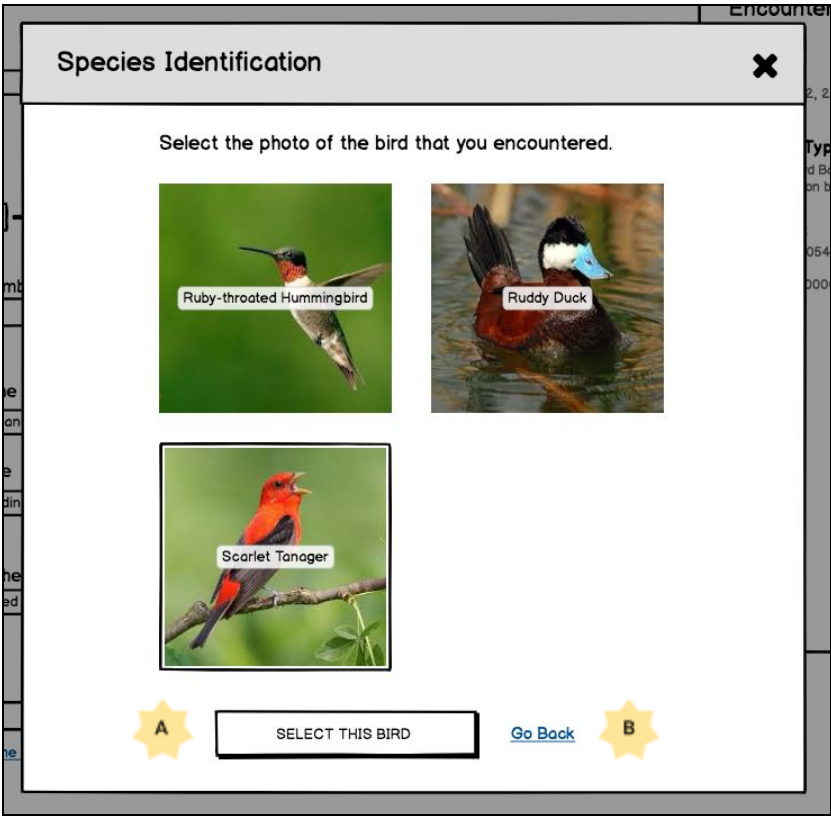

6d. Species Identification Flow Step Three: Can't Identify Bird

Note: The user will be presented with up to twelve different options of birds based on the details they provided on screen 6b. The images will be presented four to a screen. On the last available screen, if they haven't been able to identify the bird from their encounter, they will be given the option to exit the Species Identification flow which will populate "Unknown" into [screen 6](#), component F.

A	I can't identify the bird	Button		This button only appears on the final screen of the Species Identification flow. Closes the modal and populates "Unknown" into Screen 6, Component F.
B	Go Back	Text link		Take the user to the previous modal screen

6e. Species Identification Flow Step Three: Select Bird

A	Select this bird	Button		When the user has selected an image, the primary button on the modal changes to "Select This Bird," which closes the Species Identification flow and populates the selected species into into screen 6 , Component F.
B	Go back	Text link		Takes the user to the previous modal screen

Summaries of Banding and Encounter Data

Customized summary reports of bird banding and past encounter records can be quickly and easily created. By identifying specific data types--derived from the metadata and taxonomy--users can tailor the report's contents to their specifications. The proposed design allows for user to access data immediately upon request since it is dynamic and automatic.

Data Requests and Search

Search Interface

Banding and Encounter Data Search

Banding and encounter data are available for research purposes. Individual banding data records exist electronically starting in 1960. Pre-1960 banding data are available only for birds that have been encountered. Individual encounter data are available from 1913.

To search data for a specific band, enter only the band number.

Customize and Export Data

Banding and encounter data must be readily available for research purposes. To make data easy to access, retrieve, and summarize users need to be presented with an enriched and robust experience that allows them to customize data for their needs when they need it.

Appendix

Content must be agile and flexible in order to create personalized and curated content. To get to a point where information is fully exploited and working to meet the needs of an organization, time and effort must be spent building the appropriate foundation for the information ecosystem. Defining a taxonomy and metadata to help support an organization's goals for making content adaptable, customizable and easy to distribute is an important step in this process. While taxonomies and metadata share many attributes and are both designed to improve search and discovery, they are different from one another primarily in that a taxonomy helps to define keywords and organize content into hierarchical relationships while metadata describes each asset. Taxonomy and metadata are both needed to help content perform. Continuous management of both the taxonomy and metadata is important in building a solid foundation that enhances findability, allows for the configuration of content in any number of ways and ultimately provides a good user experience.

Taxonomy Architecture

A taxonomy can be thought of as an asset catalogue. It provides a useful way to define similarities and hierarchical relationships using a set of descriptive terms and labels, often referred to as a controlled vocabulary. A taxonomy labels structured and unstructured content so that it can be rearranged, reused, organized, searched, and distributed in any number of ways. This improves the ability to organize collections of connected, or related content, making it easier for users to search or browse. Without a defined taxonomy, content becomes difficult to adapt and reuse.

Taxonomies should be designed with the end user in mind. What categories would users want to access? How might they search for information relevant to their needs? It is important to control the number of collections within a taxonomy so that information is quick and easy to find, is intuitive, and has a logical flow so that users can narrow their search easily.

The scientific community and bird banders would use the bird identification and search interface to track information on an individual bird or species as well as create custom bird reports. By selecting specific data attributes, they would narrow the results set to their areas of interest. Starting with the scientific order, family, and species names, they could query all birds meeting certain specifications for length, wingspan, and/or weight. To further customize data output, facets--such as region/state, flyway boundaries, habitat, nesting, feeding behavior, color, bill shape, band size, and sound--could be included in the search.

Casual bird watchers, hunters, and general bird finders could use the bird identification and search interface to access information on birds in their area and to track information on an individual bird. Starting with the common order, family, and species names, they could narrow the search results by selecting any additional attributes, such as the facets, or length, wingspan, or weight.

Taxonomy Example

[See taxonomy example on page 62.](#)

Data Elements

	Label	Description / Usage	Required
1	Common Order	Broader Term (BT1). See metadata type 4.0.0 for facets/controlled vocabulary.	Yes
2	Scientific Order	Non-Preferred Broader Term (BT1a)	Yes
3	Common Family	Broader Term (BT2). See metadata type 5.0.0 for facets/controlled vocabulary.	Yes
4	Scientific Family	Non-Preferred Broader Term (BT2b)	Yes
5	Common Name	Preferred Term (PT)	Yes
6	Scientific Name	Non-Preferred Term (NPT1)	Yes
7	Previous Names	Non-Preferred Term (NPT2)	No
8	Length	Inches (in) from tip of bill to tip of tail.	Yes
9	Wingspan	Inches (in); distance from one wingtip to other wingtip while outstretched (fully extended).	Yes
10	Weight	Pounds (lbs)	Yes
11	Similar Birds	Other birds in family.	No
12	Flyway Boundaries	Migratory flight paths. See metadata type 13.6.2 for facets/controlled vocabulary.	No
13	Region / State	Region, state, or province within a country. See metadata type 13.6.3 for facets/controlled vocabulary.	Yes
14	Habitat	Type of shelter/living environment; landscape, landforms. See metadata type 11.3.0 for facets/controlled vocabulary.	Yes
15	Nesting	Types of areas in which bird builds nests. See metadata type 12.1.0 for facets/controlled vocabulary.	Yes
16	Feeding Behavior	Predominant type of behavior exhibited while eating. See metadata type 12.2.0 for facets/controlled vocabulary.	Yes
17	Male Primary Color	Most predominant color on a male bird. See metadata type 12.5.0 for	Yes

		facets/controlled vocabulary.	
18	Male Secondary Color	Second most predominant color on a male bird. See metadata type 12.5.0 for facets/controlled vocabulary.	Yes
19	Female Primary Color	Most predominant color on a female bird. See metadata type 12.5.0 for facets/controlled vocabulary.	Yes
20	Female Secondary Color	Second most predominant color on a female bird. See metadata type 12.5.0 for facets/controlled vocabulary.	Yes
21	Bill Shape	Provides insight into shape adaptation for how they obtain their food, diet type, nest building, preening, and defense / survival. See metadata type 12.3.0 for facets/controlled vocabulary.	Yes
22	Male Band Size	Size of band as determined by BBL. See metadata type 13.3.2 for facets/controlled vocabulary.	Yes
23	Female Band Size	Size of band as determined by BBL. See metadata type 13.3.2 for facets/controlled vocabulary.	Yes
24	Sound	Most predominant sound (call, song,) from bird type. See metadata type 12.4.0 for facets/controlled vocabulary.	Yes

Metadata

Put simply, metadata is data about data or information about content. Metadata is a set of statements, with each statement consisting of a property or element and its associated value. Any property or value applied to content that gives structure, context and meaning is considered metadata. The advantage of metadata is to improve findability by providing organization and access, delivering the right content at the right time to the right user.

Metadata is created in two ways. The first type of metadata is structural and includes elements like date, format, unique identifiers, and relationships inherited by content type. Structural metadata allows for detailed levels of content processing. The second type of metadata is descriptive and is usually added by users, such as the individual species, location, and description. Descriptive metadata helps improve discoverability of the content.

Again, it's important to anticipate users' needs. What will they be searching for? What terms would they use? When users perform a basic search the query will pull back the individual term with all the different pieces of metadata associated with it. Allowing users to search using multiple attributes gives users the ability to perform more complex searches and thus return results that are more useful.

Metadata Example

[See metadata example on page 68.](#)

Metadata Types

	Metadata Type	Description / Usage	Data Type	Nullable
1.0.0	order (scientific_order)	The full scientific name of the order in which the taxon is classified.	Text	No
2.0.0	family (scientific_family)	The full scientific family in which the taxon is classified.	Text	No
3.0.0	species (scientific_name)	The full scientific name in the lowest level taxonomic rank that can be determined.	Text	No
4.0.0	common_order	The common order as determined by popular nomenclature. This list is meant to help those users unfamiliar with scientific naming. Consider using a predefined list for uniform naming.	Faceted List (suggested): <ul style="list-style-type: none"> • Bird of Prey • Marsh Bird • Near-passerine • Nightbird • Passerine • Seabird • Waterfowl 	No
5.0.0	common_family	The common family as determined by popular nomenclature. This list is meant to help those users unfamiliar with scientific naming. Consider using a predefined list for uniform naming.	Faceted List (suggested - to name a few): <ul style="list-style-type: none"> • Albatross • Anhinga • Avocet • Barn Owl • Booby • Bunting • Bushtit • Coot • Cormorant • Crane • Creeper • Crow • Cuckoo • Dipper • Dove • Duck • Eagle • Falcon • Finch • Flycatcher • Frigatebird • Gannet • Gnatcatcher • Goose • Grebe • Grosbeak • Gull • Hawk • Heron • Hummingbird • Ibis • Jay 	No

			<ul style="list-style-type: none"> • Kingfisher • Kinglet • Kite • Lark • Limpkin • Longspur • Loon • Mockingbird • Nightjar • Nuthatch • Oriole • Osprey • Oystercatcher • Parrot • Pelican • Petrel • Pigeon • Plover • Puffin • Shrike • Stilt • Stork • Storm Petrel • Sparrow • Swallow • Swan • Swift • Thrasher • Thrush • Towhee • Trogon • Typical Owl • Verdin • Vireo • Vulture • Warbler • Waxwing • Woodpecker • Wren 	
6.0.0	common_name	The common name of the species in the lowest taxonomic rank that can be determined as known by popular nomenclature. This list is meant to help those users unfamiliar with scientific naming.	Text	No
7.0.0	french_name	The French name in the lowest level taxonomic rank that can be determined.	Text	Yes
8.0.0	image	Still-image depicting close-up of individual species to assist with species identification during encounter reporting.	Link to Image File (such as JPG, JPEG, PNG)	Yes
9.0.0	measurements	Aggregate data pulled from individual banding records. No manual input required. See metadata type 13.5.0 for specific details.	<i>(see subset of information for specific details)</i>	<i>(see subset of information for specific details)</i>
9.1.0	→ min_length_inches	Minimum length (in inches) as	Automatically populated	Yes

		recorded from banding records.	from banding data.	
9.2.0	→ max_length_inches	Maximum length (in inches) as recorded from banding records.	Automatically populated from banding data.	Yes
9.3.0	→ min_wingspan_inches	Minimum wingspan (in inches) as recorded from banding records.	Automatically populated from banding data.	Yes
9.4.0	→ max_wingspan_inches	Maximum wingspan (in inches) as recorded from banding records.	Automatically populated from banding data.	Yes
9.5.0	→ min_weight_pounds	Minimum weight (in pounds) as recorded from banding records.	Automatically populated from banding data.	Yes
9.6.0	→ max_weight_pounds	Maximum weight (in pounds) as recorded from banding records.	Automatically populated from banding data.	Yes
9.7.0	→ bird_size	Species will be categorized into a predetermined size rank as determined by data from banding records.	(suggested): <ul style="list-style-type: none"> • Small (<5" in length) • Medium (5"-9" in length) • Large (>9" in length) 	Yes
10.0.0	similar_species	List of related species or non-related species that are similar in appearance.	<i>(see subset of information for specific details)</i>	<i>(see subset of information for specific details)</i>
10.1.0	→ species	The full scientific name in the lowest level taxonomic rank that can be determined. No maximum. (Related to metadata type 3.0.0)	Text	Yes
11.0.0	location	Includes so aggregate data pulled from individual banding (and encounter) records. See metadata type 13.6.0 and metadata type 14.7.0 for specific details.	<i>(see subset of information for specific details)</i>	<i>(see subset of information for specific details)</i>
11.1.0	→ flyway	Listing of all flyways as indicated in individual banding (and encounter) records. No maximum.	Automatically populated from banding (and encounter) data.	Yes
11.2.0	→ region	Listing of all states and/or regions as indicated in individual banding (and encounter) records. No maximum.	Automatically populated from banding (and encounter) data.	Yes
11.3.0	→ habitat	A common, one word description of the habitat in which the species is commonly found to assist with species identification during encounter reporting. Maximum of one (1).	Faceted List (suggested): <ul style="list-style-type: none"> • Cost / Shoreline • Desert • Forest • Grassland • Lake / Pond • Marsh / Swamp • Mountain • Ocean • Open Woodland 	Yes

			<ul style="list-style-type: none"> • River / Stream • Urban 	
12.0.0	characteristics	Additional characteristics or assertions about the species. Meant to provide a mechanism for species identification during reporting and to provide a mechanism for structured content.	<i>(see subset of information for specific details)</i>	<i>(see subset of information for specific details)</i>
12.1.0	→ nesting	A common, one word description of the nesting area in which the species is commonly found to assist with species identification during encounter reporting. Maximum of one (1).	Faceted List (suggested): <ul style="list-style-type: none"> • Building • Burrow • Cave • Cavity • Cliff • Floating • Ground • Rock • Shrub • Tree 	Yes
12.2.0	→ feeding_behavior	A common, one word description of the feeding behavior to assist with species identification during encounter reporting. Maximum of one (1).	Faceted List (suggested): <ul style="list-style-type: none"> • Aerial Diver • Aerial Forager • Bark Forager • Dabbler • Flycatching • Foliage Gleaner • Ground Forager • Hoverer • Prober • Soarer • Stalker • Surface Diver 	Yes
12.3.0	→ bill_shape	A common, one word description of the feeding behavior to assist with species identification during encounter reporting. Maximum of one (1).	Faceted List (suggested): <ul style="list-style-type: none"> • All-purpose • Cone • Curved • Dagger • Hooked • Needle • Spatulate • Specialized 	Yes
12.4.0	→ sound	A common, one word description of the sound the species makes to assist with species identification during encounter reporting. Maximum of one (1).	Faceted List (suggested): <ul style="list-style-type: none"> • Bugle • Buzz • Cackle • Caw • Chatter • Chirp • Cluck • Coo • Grunt • Honk • Hoot • Quack • Rattle • Screech • Silent 	Yes

			<ul style="list-style-type: none"> • Squawk • Trill • Tweet • Warble • Whine • Whip • Whistle • Yelp 	
12.5.0	→ male_primary_color	A common, one word description of the male primary color to assist with species identification during encounter reporting. Maximum of one (1).	Faceted List (suggested): <ul style="list-style-type: none"> • Black • Blue • Blue-gray • Blue-green • Brown • Buff • Chestnut • Dark brown • Dark gray • Gray • Gray-brown • Gray-black • Green • Olive • Orange • Pink • Purple • Red • Rust • White • Yellow 	Yes
12.6.0	→ male_secondary_color	A common, one word description of the male secondary color to assist with species identification during encounter reporting. Maximum of one (1). Should not be the same as the primary color.		Yes
12.7.0	→ female_primary_color	A common, one word description of the female primary color to assist with species identification during encounter reporting. Maximum of one (1).		Yes
12.8.0	→ female_secondary_color	A common, one word description of the female secondary color to assist with species identification during encounter reporting. Maximum of one (1). Should not be the same as the primary color.		Yes
12.9.0	→ male_band_size	Aggregate listing of all male band sizes as indicated in individual banding records. No maximum.	Automatically populated from banding data.	Yes
12.10.0	→ female_band_size	Aggregate listing of all female band sizes as indicated in individual banding records. No maximum.	Automatically populated from banding data.	Yes
13.0.0	band_record	Information about the initial banding of an individual bird.		<i>(see subset of information for specific details)</i>
13.1.0	→ band_date	Full date of bird banding. (MM-DD-YYYY)	Date	No
13.2.0	→ bander_permit	Permit number of bander.	Numeric	No
13.3.0	→ banding_data	Information pertaining to the band itself.		<i>(see subset of information for specific details)</i>
13.3.1	band_type	Band material and style. Style should be filtered based on	Faceted List (suggested): <ul style="list-style-type: none"> • Unknown 	No

		material selected.	<ul style="list-style-type: none"> ○ Unknown ● Aluminum <ul style="list-style-type: none"> ○ Butt-end toll free ○ Lock-on toll free ○ Tall toll free ○ Butt-end new address ○ Lock-on new address ○ Rivet toll free ○ Short toll free ○ Pre-open toll free ○ Short new address ○ Rivet new address ○ Butt-end ○ Lock-on ○ Tall ○ Wrap around ○ Flipper ○ Rivet ○ Short ○ Pre-open ○ Tall new address ○ Pre-open new address ○ Butt-end web address ○ Lock-on web address ○ Rivet web address ○ Short web address ○ Butt-end Bowie address ● Monel <ul style="list-style-type: none"> ○ Butt-end ○ Lock-on ○ Butt-end toll free ○ Pre-open ○ Pre-open toll free ● Titanium <ul style="list-style-type: none"> ○ Butt-end ● Incoloy or Stainless <ul style="list-style-type: none"> ○ New address ○ Butt-end new address ○ But-end ○ Lock-on ○ Butt-end toll free ○ Lock-on toll free ○ Flipper ○ Rivet ○ Rivet toll free ○ Triangular toll free ○ Triangular ○ Triangular new address ○ Web address ● Bimetallic <ul style="list-style-type: none"> ○ No address ○ Butt-end ○ Lock-on ○ Tall ○ Rivet ○ Short
